Aim of the Workshop

As cities strive to be adaptable to population change, climate change and the pressures of modernisation and globalisation, creating sustainable residential areas is key to providing liveable environments for inhabitants. Sustainable residential areas provide housing for happy and healthy residents, prosperous social and cultural environments, and ensure a productive and motivated workforce for local economies. In addition, as inhabitants become more diverse and hold their planners accountable for their living environments, their participation in planning is an important topic. This year's workshop will focus on the aspects of urban planning that create sustainable living areas for city residents over the long term, and also that encourage and accommodate the participation of residents in the urban planning of their cities.

Supported by

Japan Science and Technology Agency
Kanazawa University

Chairman

Prof. Zhenjiang SHEN, Kanazawa University
Prof. Mitsuhiko KAWAKAMI, Kanazawa University
Prof. Guangwei HUANG, Sophia University

Program Committee

WARNING: Bears!

There have been bear sightings reported on Kakuma Campus

Actions to Take When You Sight a Bear (From Kanazawa City HP)

“If you encounter a bear...”

- Quietly walk away without haste.
- Do not make noises that may excite the bear.
- Never escape by running away. (Bears tend to go after things that run away)

“If the bear approaches you...”

- Do not make loud noises, put down your belongings one by one, and try to shift the bear’s attention away.
- Do not turn your back to the bear, and slowly walk away.
- Do not go back to the encounter site, even after the bear leaves the area.
