Aim of the Workshop

Standards and indicators are important for measuring carbon performance of a city. How to account for carbon emitted when activities and services are consumed in locations is a key issue in urban area. Furthermore, the investigation on relationship between carbon emitted in a city and its underlying drivers – population, economic structure, energy source, transport and built infrastructure, and urban services – is complicated. This complexity makes it especially hard to evaluate planning alternatives for low carbon city. Nevertheless a low-carbon city is a sustainable, efficient, livable, and developing indicators for evaluating a city's sustainable development objective are widely concerned in the world.

Supported by

International Community of Spatial Planning and Sustainable Development
Japan Society for the Promotion of Science
Kanazawa University

Chairman

Prof. Zhenjiang SHEN, Kanazawa University
Prof. Guangwei HUANG, Sophia University

Program committee

Prof. Mitsuhiko Kawakami, Kanazawa University
Prof. Kenichi SUGIHARA, Gifu Keizai University
Prof. Ying ZHANG, Fuzhou University
Mrs.Rongrong LI, Landscape Architecture Corporation of China.
Mr. Pindo TUTUKO, Kanazawa University
Mr. Xuefei LI, Kanazawa University
Mr. Yuanyi ZHANG, Kanazawa University

Keynote speakers

Prof.Lanchun BIAN, Tsinghua University
Prof. Yan LIU, The University of Queensland
Prof. Guangwei HUANG, Sophia University
Prof. Jente PAI, Chengchi University
Mr. Hulao FANG, Urban planning and design institute, China Construction, Inc.
